Labour Force Statistics ◆ November 2006

HIGHLIGHTS

All labour force statistics are seasonally adjusted, unless otherwise indicated

BC's unemployment rate rises slightly as service sector sheds jobs

British Columbia's unemployment rate increased to 4.9% in November as employment in the province fell slightly (-0.2%) while the labour force was unchanged from October.

Service sector sheds jobs, but more people working in goods industries

There were fewer jobs in the service sector (-1.0%), which employs eight out of every ten working British Columbians. Most industries in the sector downsized, with information, culture & recreational services (-4.5%), health care (-4.1%) and professional, scientific & technical services (-3.5%) posting particularly large declines.

Employment in goods industries jumped 2.6%, with relatively strong job growth more or less across the board. Manufacturing (+1.9%) employment increased for a third straight month, and in the construction industry, employment picked up (+0.6%) after a three-month long downturn.

Reflecting the job growth in the goods sector, which employs more men than women, the number of men with jobs increased 0.3% but fewer women (-0.8%) were employed in November.

Overall, the number of employees was virtually unchanged (+0.1%) from October, while the number of self-employed British Columbians dropped off 1.6%. For the second month in a row, full-time employment (-0.8%) fell, but there were more (+2.0%) part-time workers.

The youth unemployment rate climbed 1.1 percentage points, rising to 9.3%. However, the jobless rate for those aged 25 and over was little changed from October, edging up 0.1 percentage point to 4.0%.

Less variability in regional unemployment rates, but Southwest BC still a hot spot

BC's regions are seeing considerably less variability in jobless rates than has been the case in the past. In November, rates ranged from 4.1% (*3-month-moving average, unadjusted*) in Mainland/Southwest and Thompson/Okanagan to 6.6% in Kootenay. Historically, differences among the regions have been much more significant.

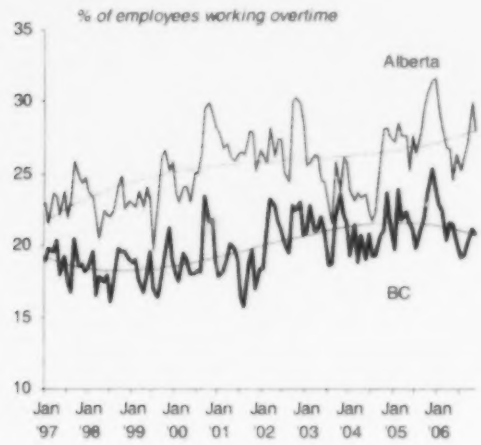
The downward trend in jobless rates in some of the traditionally higher-unemployment regions of the province (such as Kootenay, Cariboo and North Coast/Nechako) masks some weakness in regional labour markets. North Coast/Nechako, for example, has seen

2007-01725/

its labour force decline in tandem with employment levels. This has also been a significant factor in the Kootenay region. Northeast, which has traditionally had one of the lowest jobless rates in the province, has lost that advantage, as both employment and the labour force shrank earlier in the year, although the trend has been reversing in recent months.

For the province as a whole, evidence of a booming labour market is particularly strong in the southwest corner, particularly the urban areas. Vancouver (4.6%, *seasonally adjusted*), Abbotsford (3.8%) and Victoria (3.5%) continue to see extremely low unemployment rates which reflect strong job growth in these areas.

An increased dependence on overtime work in some parts of the country



Have tight labour market conditions translated into an increased need for overtime work? There is some evidence to support the view that this may be a factor in Alberta, which is experiencing serious labour shortages, but it does not seem to be as much of a factor in BC. The percentage of workers putting in overtime hours in Alberta has risen significantly since the mid-1990s.

Year-to-date, the use of overtime has been more prevalent in Alberta than in any other province, with about 27% of workers in that province spending extra time on the job. The national rate was 22%. Saskatchewan (24%), Ontario (24%) and Manitoba (23%) also have a higher-than average incidence of overtime work, while BC's rate is lower, at 21% of employed workers. During the first 11 months of 2006, Albertans who worked overtime spent an average of 2.7 extra hours on the job each week, compared to 1.9 hours nationally and 1.7 hours in BC.

The Nation

Canada's unemployment rate inched up to 6.3% as labour force growth (+0.3%) outpaced the increase in employment (+0.1%) in November. However, job growth was localized in Alberta (+0.5%), Ontario (+0.3%) and parts of Atlantic Canada. BC's unemployment rate remained among the lowest in the country. Alberta (3.1%), Saskatchewan (3.9%) and Manitoba (4.6%) were the only regions where the incidence of unemployment was lower in November.

Selected Statistics	Nov-06	Oct-06	Nov-05

NOTES: 1. Occupation specific Unemployment Rates include only those unemployed who worked in the past year. The "All Occupations" rate incorporates total unemployed persons which includes an "Occupation Unclassified" category.

2. Due to the relatively small sample sizes from which disaggregated data are derived, caution should be used in the interpretation of month-to-month changes in the estimates.

Labour Force Statistics

This report is based on statistics from the Labour Force Survey produced monthly by Statistics Canada. Questions and comments should be directed to Data Services at (250)387-0327 or write to BC.Stats@gov.bc.ca.

Definitions and Explanatory Notes

Reference Week

Monthly estimates of employment, unemployment, and persons not in the labour force refer to the specific week covered by the survey each month, normally the week containing the 15th day.

Labour Force

The labour force is composed of those members of the civilian non-institutional population 15 years of age and over who, during the reference week, were employed or unemployed.

Employed

Employed persons are those who, during the reference week, either: (a) did any work at all, or (b) had a job but were not at work due to own illness or disability, personal or family responsibilities, bad weather, labour dispute, vacation, or other reason not specified above (excluding persons whose job attachment was to a job to start at a definite date in the future).

Unemployment

Unemployed persons are those who, during the reference week, either: (a) were without work, had actively looked for work in the past four weeks (ending with the reference week), and were available for work; or (b) had not actively looked for work in the past four weeks but had been on layoff and were available for work; or (c) had not actively looked for work in the past four weeks but had a new job to start in four weeks or less from the reference week, and were available for work.

Unemployment Rate

The unemployment rate represents the number of unemployed persons expressed as a per-centage of the labour force. The unemployment rate for a particular group (age, sex, marital status, etc.) is the number of unemployed in that group expressed as a percentage of the labour force for that group.

Participation Rate

The participation rate represents the labour force expressed as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex, marital status, etc.) is the labour force for that group expressed as a percentage of the population for that group.

Employment Rate

The employment rate(employment/population ratio) is the number of employed persons expressed as a percentage of the population 15 years of age and over. The employment rate for a particular group (age, sex, marital status, etc.) is the employment for that group expressed as a percentage of the population for that group.

Rounding

Estimates published by the Labour Force Survey are rounded to the nearest thousand but all derived values (totals, averages, rates, ratios, percent changes, etc.) are calculated from unrounded figures. Therefore, the sum of the individual rounded items may not equal the total. Unadjusted estimates rounded to hundreds are available from BC STATS on request.

Seasonal Adjustment

Fluctuations in economic time series are caused by seasonal, cyclical and irregular movements. A seasonally adjusted series is one from which seasonal movements have been eliminated. Seasonal movements are defined as those which are caused by regular annual events such as climate, holidays, vacation periods, and cycles related to crops, production and retail sales associated with Christmas and Easter. It should be noted that the seasonally adjusted series contain irregular as well as longer-term cyclical fluctuations.
